Aim - To implement Non-Restoring division algorithm using c-programming.

Objective -

1. TO understand the working Of Non-Restoring division algorithm.
2. To understand how to implement Non-Restoring division algorithm using cprogramming.

Theory:

In each cycle content of the register, A is first shifted and then the divisor is added or subtracted with the content of register A depending upon the sign of A. In this, there is no need of restoring, but if the remainder is negative then there is a need of restoring the remainder. This is the faster algorithm of division.

Perform 8 ÷ 3 by non-restoring division technique.

| | A Register | Q Register | |
|--------------------|------------|------------|--------------|
| Initially | 0 0 0 0 | 1 0 0 0 | |
